End-of-course evaluations results, as one indicator of teaching effectiveness, are used:

- to help instructors improve future offerings of courses;
- to inform students about courses and instructors;
- as a component of the teaching dossier; and
- to help administrators and faculty committees in their decision-making processes.

Written comments are treated as confidential and are not made available to the McGill community.

The course ratings reported here are only one indicator of teaching effectiveness and these results should be treated with caution since they represent reports on only one particular course.

I do think some parts were interesting. However, there was quite a lot of overlap between this class and Higher Algebra 1, since we need a lot of "more advanced" concepts like localizations, Noetherian rings, Affine schemes to do algebraic geometry. I do think it would be better to make a more advanced Algebraic Geometry class that assumes this knowledge. That way we could cover much more material and it would be much closer to modern Algebraic Geometry.

Q2. Overall, I learned a great deal from this course.

He's a very nice professor, very patient and kind. He also explains material pretty well when you're one-on-one with him. However, in class, I often had trouble following what was going on. The concepts weren't always motivated, and it was hard to keep track of the big picture of the class.
I really liked the implementation of a five minute break during lectures and how we were able to ask questions on Edstem or during office hours.

The material was presented in a digestible way. I liked that the homework questions were gradually harder, and I think it was a good idea to have some 'easier' questions so that we can grasp the concepts before making complicated arguments. I also liked that there were many examples, I would be lost without them.

The instructor engaged me in the course material.

The professor never made anyone feel bad for asking a question which might have been rather simple.

[For team-taught courses] There was excellent coordination of the course content between instructors.
